

Roam

Your transportation
options in one place

Narrative Digital Prototype by: AnnDrea Butler, Austen
Skopov-Normane, Diana Nguyen, Thu (Kevin) Zaw

What is Roam?

Roam is a consolidated travel app available on mobile phones and smart watches. Easily see your ride options across apps without having to toggle between them – choosing your ride has never been so easy!

Benefits of Roam

FIND THE BEST PRICE

See prices of all available options on one screen

SEE ALL ETA'S

View all ETA's and travel times across apps

QUICK NAVIGATION

Select your chosen ride option to be routed to their app

Why Roam?

SOLVES REAL PROBLEMS

Eliminates the need to switch between multiple apps

MULTIPLE REVENUE STREAMS

Commission per booking, promoted listings, subscriptions, etc.

SCALABLE MODEL

Expand city by city, integrate other transportation services like car rentals, event shuttles, or parking

Meet Erin

Erin is a full-time student in her last year of her bachelor's degree at DePaul University in Chicago. She balances her schoolwork with a part-time retail job, babysitting, and spending time with friends.

Her method of travel isn't always consistent; sometimes, she is able to get to work and babysitting via public transportation, but if she's running late, using a rideshare app or taking a taxi is in her best interest. These rides can get expensive, as the cost can be unpredictable. **Erin is constantly checking all forms of available transportation with cost at the forefront of her mind.** She toggles between different mobile apps to see her options: public transportation at a fixed cost, Uber, Lyft, and taxis. It always takes her a decent amount of time to open each travel app, type in her destination, and compare costs. **She wishes there were an easier way to see all available travel costs in one place so she can choose the cheapest option.**

Age: 18

Location: Chicago, IL

Occupation: Undergrad student

Employment: Part-time

Goals: Succeed in school, save up money, explore Chicago, meet new people, time management

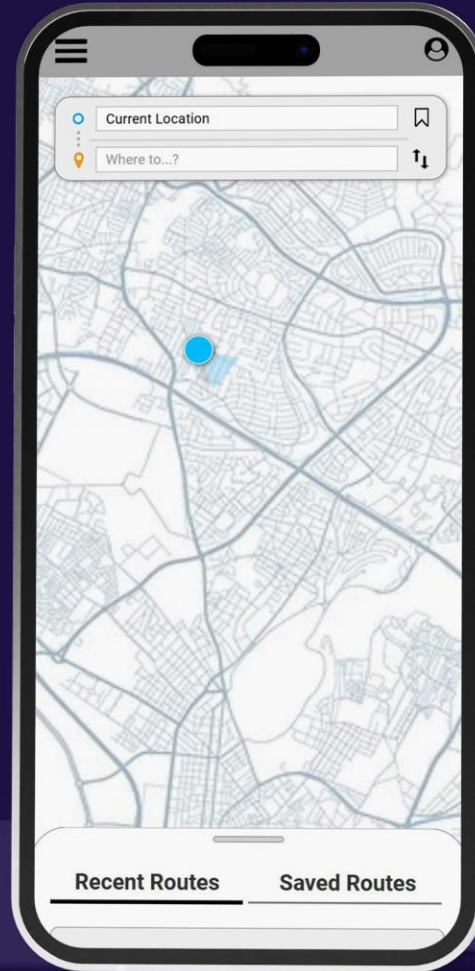

User Type: Budget traveler

Biggest Travel Concern: Cost

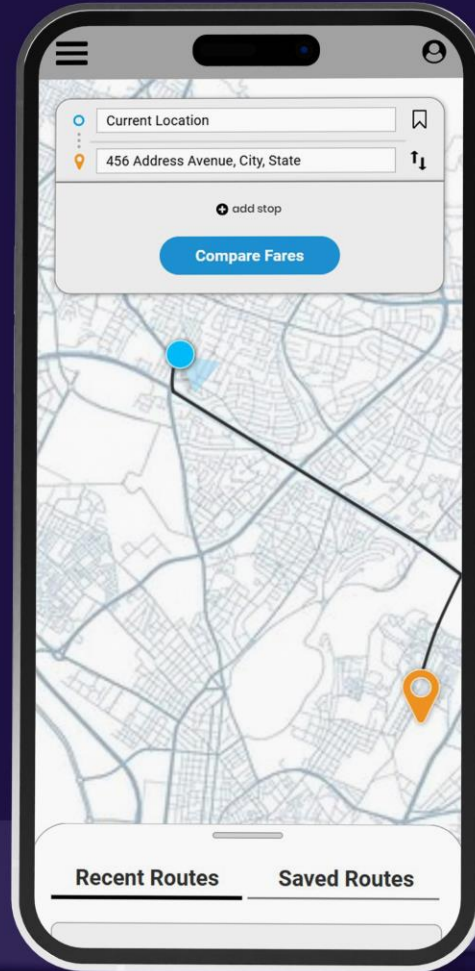

Scenario

- Erin's class ends later than expected
- She needs to get to her part-time job quickly and affordably
- Erin opens *Roam* on her phone

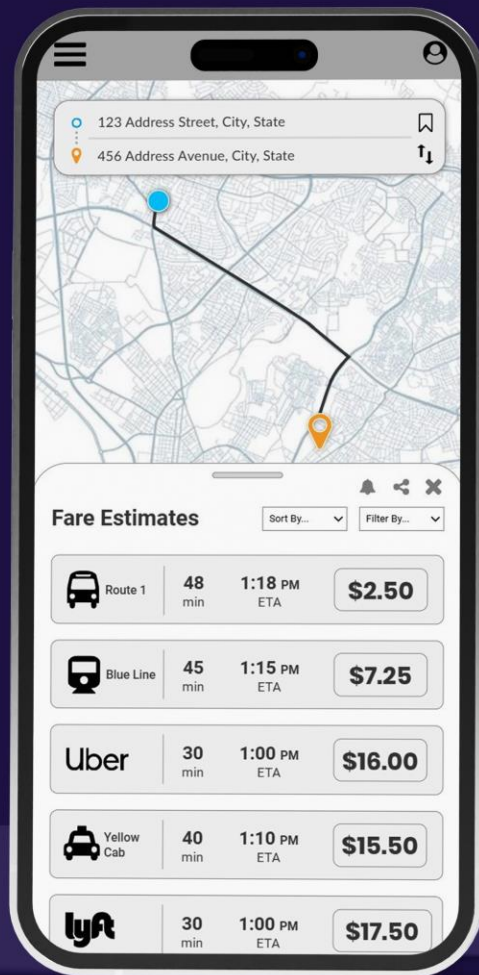

Search Route

- She searches her route from campus to work using her current GPS location

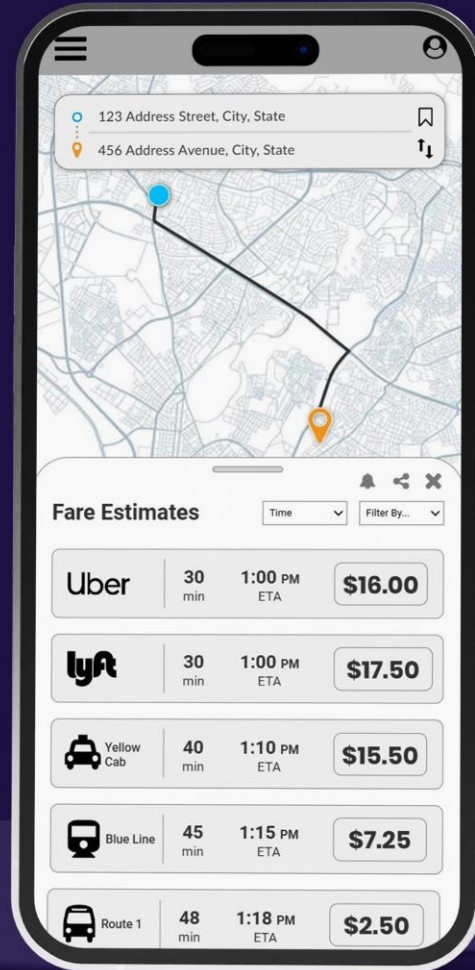

Compare Fares

- *Roam* instantly compares public transit, rideshare, and taxis in one view
- Erin sees the commute time, ETA, and estimated cost for each option
- She has the ability to sort or filter her results

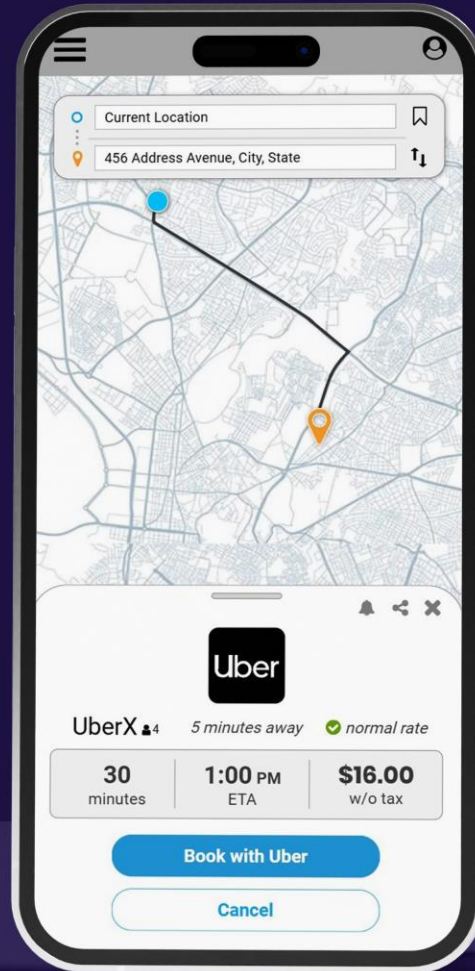

Find Quickest Ride

- Since she's running late, she sorts her options by time
- *Roam* displays the quickest option first, with Uber being her best choice

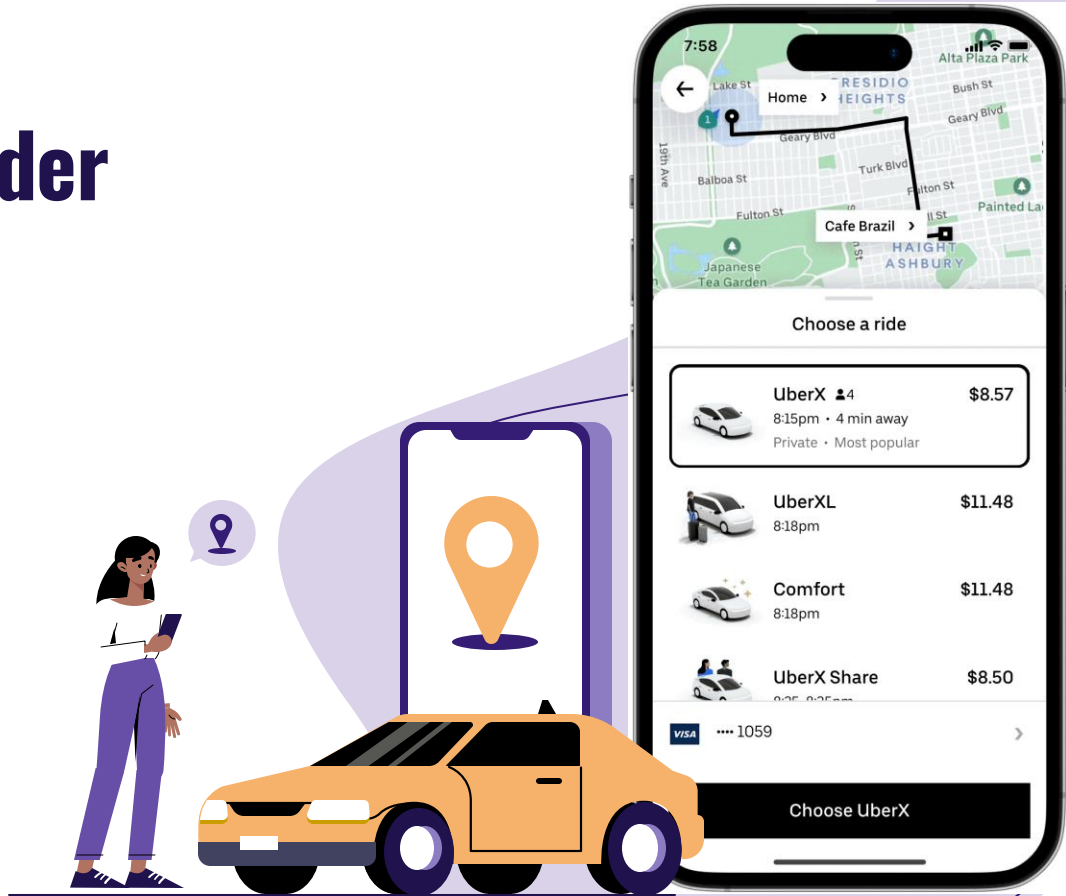

Confirm Selection

- She taps Uber as her chosen option
- Erin views more details about the ride
- Then she confirms her selection

Book with Provider

- *Roam* redirects her to the Uber app with the pickup and destination pre-filled
- Erin books the ride and is on her way to work!
